

DZMarket - Runbook Ops + Interview Prep

Version: 2026-03-03

Audience: owner + equipe ops/dev

1) Infra production

1.1 Serveurs Hetzner

- `dzm-app-01` (`91.107.239.5`): Caddy + Supabase stack
- `dzm-db-01` (`46.225.88.249`): PostgreSQL dedie
- `dzm-storage-01` (`91.98.227.237`): MinIO/S3

1.2 Domaines

- `app.dzmarket.pro` -> frontend web
- `api.dzmarket.pro` -> Supabase/Kong
- `www.dzmarket.pro` -> redirect vers `app.dzmarket.pro`
- `dzmarket.pro` -> redirect vers `app.dzmarket.pro`

2) Commandes essentielles

2.1 SSH (PowerShell)

```
```powershell
$key = "$env:USERPROFILE\.ssh\dzmarket_hetzner"
ssh -i $key -o IdentitiesOnly=yes root@91.107.239.5 "echo ok; hostname"
```
```

2.2 Etat stack

```
```bash
cd /opt/supabase/docker
docker compose -f docker-compose.yml -f docker-compose.s3.yml ps
```
```

2.3 Health web/api

```
```bash
curl -I https://app.dzmarket.pro
curl -I https://api.dzmarket.pro
```
```

3) Deploy web

Build + zip local

```
```powershell
flutter build web --release --dart-define-from-file=test/test_env.json
powershell -NoProfile -Command "Compress-Archive -Path '.\build\web*' -DestinationPath
'.\dzmarket-web.zip' -Force"
```

...

## Upload + extract serveur

```cmd

```
scp -i "%USERPROFILE%\ssh\dzmarket_hetzner" -o IdentitiesOnly=yes .\dzmarket-web.zip  
root@91.107.239.5:/tmp/dzmarket-web.zip  
ssh -i "%USERPROFILE%\ssh\dzmarket_hetzner" -o IdentitiesOnly=yes root@91.107.239.5 "rm -rf  
/var/www/dzmarket-web/* && unzip -oq /tmp/dzmarket-web.zip -d /var/www/dzmarket-web"  
curl.exe -I https://app.dzmarket.pro
```

...

4) Deploy Edge Function (ex: job-runner)

```cmd

```
scp -i "%USERPROFILE%\ssh\dzmarket_hetzner" -o IdentitiesOnly=yes
.\supabase\functions\job-runner\index.ts root@91.107.239.5:/tmp/job-runner.index.ts
ssh -i "%USERPROFILE%\ssh\dzmarket_hetzner" -o IdentitiesOnly=yes root@91.107.239.5 "mkdir -p
/opt/supabase/docker/volumes/functions/job-runner && cp /tmp/job-runner.index.ts
/opt/supabase/docker/volumes/functions/job-runner/index.ts && cd /opt/supabase/docker && docker
compose -f docker-compose.yml -f docker-compose.s3.yml up -d --force-recreate functions"
```

...

## 5) Smoke scripts (obligatoires)

### SLI

```powershell

```
.\scripts\sl_i_quick_check.ps1 -WindowMinutes 10 -SampleCount 30 -SshKeyPath  
"$env:USERPROFILE\ssh\dzmarket_hetzner"
```

...

Auth/API/templates

```powershell

```
.\scripts\auth_smoke_check.ps1 -AppServerIp 91.107.239.5 -SshKeyPath
"$env:USERPROFILE\ssh\dzmarket_hetzner"
```

...

Note:

- `SendRecoveryTest` peut echouer en `429` si le test recovery est relance trop vite.

## 6) Caddy redirections root/www

Extrait attendu dans `/etc/caddy/Caddyfile`:

```caddy

```
www.dzmarket.pro {  
  redir https://app.dzmarket.pro{uri} 301  
}  
  
dzmarket.pro {
```

```
redir https://app.dzmarket.pro{uri} 301
}
...
```

Apply:

```
```bash
caddy validate --config /etc/caddy/Caddyfile
systemctl reload caddy
```
```

7) Troubleshooting rapide

7.1 SSH KO depuis un poste

1 Tester port 22:

```
```powershell
Test-NetConnection 91.107.239.5 -Port 22
```
```

- 1 Verifier cle + passphrase.
- 2 Verifier `fail2ban`/firewall cote serveur.

7.2 Erreur scp chemin local

- Verifier chemin reel (poste/cwd).
- En CMD, utiliser chemins absolus `C:\...`.

7.3 ADB non trouve

- Utiliser `C:\Android\sdk\platform-tools\adb.exe`.

8) Lancement public - regle simple

GO si:

- quality gate PASS
- mix load reference PASS (`220+5`)
- SLI PASS
- auth smoke PASS
- smoke manuel P0 PASS

NO-GO sinon.

9) Interview prep (Tech Lead)

Pitch court:

- migration complete vers infra self-hosted
- runbooks, QA, charge, incidents
- focus fiabilite + delivery + mentoring

Points a illustrer:

- 1 incident SSH resolu sans downtime majeur

- 2 correction label URLs + callback auth
- 3 campagne charge et definition budget d'exploitation
